The KEY-POS

Retail Management System

Since 1980, **DBMS Inc.** has been providing quality, high-performance computer systems. Today, with users all across the country, the **KEY-POS Retail Management System** is an industry leader in affordable retail systems.

KEY-POS was designed from the ground up with emphasis on performance, control, flexibility, information tracking, and presentation. Dollar-for-dollar, no other system matches the power and features of **KEY-POS**.

KEY-POS uses only industry standard PC and Point of Sale equipment and a true multiuser operating system/database to provide outstanding performance at an affordable price. The system's centralized design ensures data integrity and complete integration no matter how many users are on the system.

At DBMS Inc., our #1 priority is Satisfied Customers. The system was designed to be easy to learn, use, and operate on a day-to-day basis. You'll find no complicated day, week, or month-end procedures in the system nor any time-consuming posting, updating, or closing processes. All information is updated live, automatically!

You are never alone with KEY-POS. All systems are assembled and tested at our facility and are delivered to you with all software loaded and configured. Plug it in and away you go with turnkey installation options.

The system is fully documented with a comprehensive user manual. **DBMS Inc.** periodically publishes additional documentation for special situations. In addition, support assistance is just a phone call away and our support rates are some of the lowest in the industry!

Your investment in **KEY-POS** is always protected. Based primarily on input and suggestions from our users, **DBMS** regularly releases updates for the system which add new features, reports, etc., and keeps you on the cutting edge of proven retail systems technology.

We urge you to compare **KEY-POS** to other retail systems. You'll find that feature for feature, **KEY-POS** beats the competition hands down.

DBMS Inc.

The
K E Y - P O S
Retail Management System

The **KEY-POS** *Retail Management System* from **DBMS Inc.** is one of the most advanced point-of-sale, inventory control and accounting systems available.

Utilizing a <u>true</u> multi-user database technology on industry standard computer equipment, **KEY-POS** attains unequaled performance and reliability at an affordable price.

KEY-POS was designed and written specifically for retailers. The system provides a very high degree of control, flexibility, and automation which translates to savings in both time and money!

Hardware Stores
Home & Garden
Lumber Yards
Feed & Seed
Gift Shops
Pool & Patio
Gun Shops
And More!

KEY-POS is a complete retail system including the following features:

◆ Point-of-sale processing

◆ Inventory control

◆ Purchasing

◆ Accounts receivable

◆ Management & setup control

◆ Over 100 reports and inquiries

◆ Data import and export capabilities

◆ Electronic data transfer to and from select wholesale distributors

◆ Integrated rental module available

◆ Ability to email and fax invoices and statements automatically from the system

◆ Multiple users – up to 99 registers/users on a single, standard PC

◆ Multiple store capability

◆ High performance database with built-in query/reporting language

◆ Live posting provides instant, up-to-the-minute information

◆ Support direct from the authors

◆ Easy to learn and use

DBMS Inc.

POINT-OF-SALE

The **KEY-POS** system will help you service customers better and faster; while at the same time capturing and tracking a wealth of information.

The system can employ a high degree of automation including bar code scanning, automatic product look-up, on-account credit limits, automatic billing, customer special pricing and much more!

The **KEY-POS** system supports the following features:

- Transaction processing including: sales, refunds, voids, backorders, special orders, layaways, hold tickets, service tickets, and bids
- Clerk and/or salesperson ID tracking on all transactions
- Integrated customer mailing list with sales tracking
- Automatic product look-up from inventory or unlimited auxiliary item catalogs
- Display SKU, description, quantity on hand, price, bar code, and floor location, and more
- Pop-up search windows for customers, inventory, accounts, all master data, and help
- Supports manual price overrides, line-item discounts, markdowns, and order discounts
- Automatic customer special pricing, quantity breaks, promotional pricing and assortment (mix & match) pricing
- Discounts for customers, customer types, accounts, prompt payment, and quantity breaks

- Gift Cards available at Point of Sale
- Support for up to 10 user-defined tendering types
- Customizable receipt and/or invoice printing with 11 receipt format options, 9 invoice format options
- Ability to suspend transactions or create hold tickets
- Live register readings, sales posting, and information tracking
- Easy register close-out with user-defined counting template, automatic reconciliation, and combined closing feature
- Inquire upon and/or reprint any transaction from any date
- Full support and tracking for petty cash in and out transactions
- Optional module supports on-line (EFT) authorization of Visa, MasterCard, AmEx, Discover, etc., with detailed tracking, instant batch verification, and closing integrated with register reconciliation
- Unlimited number of user-defined sales tax authorities supporting state, county, city, or any other taxable or non-taxable situation
- Exclusive transaction query lets you select transactions by any combination of date, register, customer, items, tender type, or amount, and display a user-defined report of the results
- Full complement of audit, history, transaction, and sales reporting

KEY-POS is the most complete, full-featured and powerful system available in its price range. The system is extraordinarily easy to learn and use.

DBMS Inc.

The KEY-POS
Retail Management System

The **KEY-POS** sales screen is clear, easy to read, and uncluttered. Customer orders can be entered as fast or even faster than on a manual cash register, especially if scanning is used.

Customer and product searches, discounts, markdowns, price-override functions, item inquiries, and on-line help are all just a single keystroke away.

Create itemized receipts fast. **KEY-POS** ensures that the right price is charged for each item and the inventory levels are maintained automatically.

Sales Entry

KEY-POS gives you control over order processing. You decide what types of payments you accept and how they are handled.

Up to 10 user-defined tender types are available and customers are able to split payments up to 5 different ways per order.

With **KEY-POS**, processing house-account customer orders is no more difficult than cash sales. There's even an account search window available if a customer doesn't know their account number. Billing is automatic and immediate.

Payment Options

DBMS Inc.
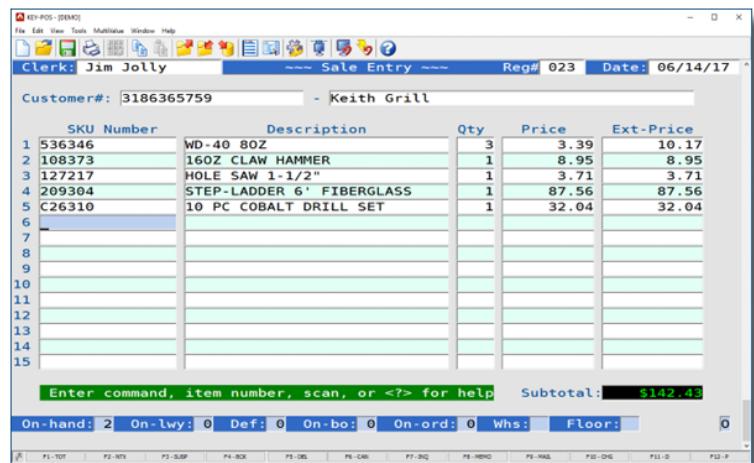

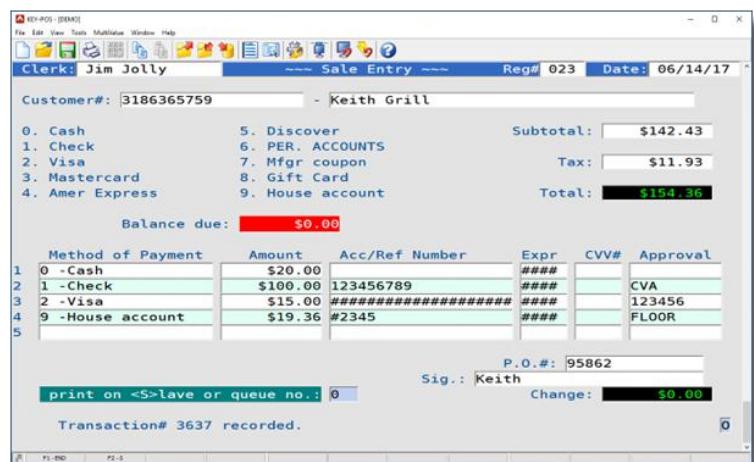

ACCOUNTING

The KEY-POS Accounts Receivable System is just what the doctor ordered. Fully integrated with the point-of-sale module and geared for retail operations, you won't find a better suited accounts receivable system.

The **KEY-POS** Accounts Receivable system supports the following features:

◆ Unlimited number of accounts, invoices, and payments

◆ Multiple account types allow for separate processing options

◆ Account information includes customer name, address, phone, contact, default tax code, terms code, credit limit, and more

◆ Invoices are automatically created from point–of–sale transactions

◆ Supports both open item and balance forward statements

◆ Supports payment terms discounts

◆ Auto or manually apply payments, including tax correction

◆ Supports open credits, debits, and miscellaneous on-account payments

◆ Manual invoice, debit/credit memo entry

◆ Optionally prints invoices live or in batch by account with 3 plain or 6 pre-printed formats including laser

◆ Prints account statements on any of 7 preprinted or 2 plain paper forms

◆ Assess finance charges with control over accounts, aging, and rates

◆ Reversal and deletion features to fix mistakes

◆ Assess late fees for non-payment on overdue accounts

◆ On-line inquiry gives you up-to-the-minute status of any or all accounts

◆ Detail or summary aging report with variable aging date and ranges

◆ Optionally print payment received vouchers at point-of-sale with reprint option

◆ Detail invoice register and payment audit reporting

◆ Ability to email & fax invoices and statements directly from the system

As transactions are entered at the register, your charge customers are automatically billed, on the spot. Instantly find customer balances and outstanding invoices.

Customers will appreciate how fast **KEY-POS** handles on-account charges and you'll like the way it helps keep your cash flow moving!

DBMS Inc.

The **KEY-POS**
Retail Management System

Register Closing & Balancing System

Our specialized register closing and balancing system is a snap to use and lets you know instantly if the register is over or short. No more endless adding machine tapes to store.

KEY-POS can even record the amount of each denomination of coin and bills.

House account charges and petty cash transactions are automatically calculated into the balancing. There is even a special combined register balancing option!

Accounts Receivable

For many store owners, house account charges make up a substantial portion of sales. Unfortunately, accounts receivable is probably responsible for most of your headaches.

The **KEY-POS** accounts receivable system is easy to setup and maintain. Customer billing is automatic through point-of-sale and generating monthly statements is a breeze.

Finance charges, late fees, balance forward accounting, detailed invoices, terms discounts, and payment plans are all no problem. **KEY-POS** was designed for retail and it shows!

DBMS Inc.

INVENTORY

The KEY-POS Inventory Control Module is one of the best in the business, giving you unprecedented control over your inventory.

Without good inventory control, a point-of-sale system is just a glorified cash register. **KEY-POS** excels at controlling inventory, supporting virtually every feature you can imagine.

KEY-POS takes it even one step further. Unlike other systems, **KEY-POS** adds a high degree of automation to the system so you won't have to spend hours every day maintaining the information.

The **KEY-POS** Inventory Control Module supports the following features:

◆ Unlimited number of SKU's, aliases (alternate names or numbers), and bar codes per vendor per item with duplicates allowed

◆ Outstanding quantity control including: Items on-hand, on-hold, backordered, defective, on-order from vendor, physical count, adjustments, and sold— current and previous year

◆ 10 level reporting classifications include codes for department, group, class, size, type, warehouse, floor location, color, fine-line code, and manufacturer

◆ List price, regular selling price, and alternate (sale) price

◆ Replacement and average costing techniques to 4 decimal place accuracy

◆ Unlimited number of vendors per item along with their costs and purchase histories

◆ Provides quantity break, level, sales, promotional, assortment, and special customers' pricing

◆ Extended description field for detail specifications

◆ Add-on items for suggested selling

◆ Kitting, package pricing, and costing with unlimited number of items per kit and component explosion

◆ Unique quantity matrix allows tracking of different sizes, colors, styles, etc., on a single SKU

◆ Variable taxing assignments

◆ Serialized item tracking

◆ Our exclusive memo processing lets you predetermine special information to be captured upon sale of an item

◆ Special log feature can track every movement of an item

◆ Prints bin, price, and shelf labels with or without bar codes

◆ Separate complete physical inventory and cycle count system with optional upload of counts from hand-held PDT

◆ Complete purchasing module and suggested buying with optional load of order quantities

It would take pages to list every feature available in the **KEY-POS Inventory Control Module**. Don't settle for anything less than **KEY-POS**.

DBMS Inc.

The KEY·POS
Retail Management System

Inventory Control

The KEY-POS Inventory Control System is the best in the business. You'll always know what's in stock and what's not. Quantity levels and sales information are updated live from point-of-sale orders.

KEY-POS gives you unequaled control over pricing, costing, purchasing, and reporting.

KEY-POS Inventory Control alone can save you hundreds of hours of work every year.

Once you have **KEY-POS**, you'll wonder how you ever got along without it!

Promotional Pricing

Managing sales, promotions, or other special pricing situations is a snap with **KEY-POS**.

Simply pre-load the items and enter a date range for the promotion. **KEY-POS** will automatically begin using the promotional pricing on the beginning date and stop using it on the end date.

Of course, you can run multiple promotions simultaneously. You can even put the same item on two or more different promotions at the same time!

DBMS Inc.
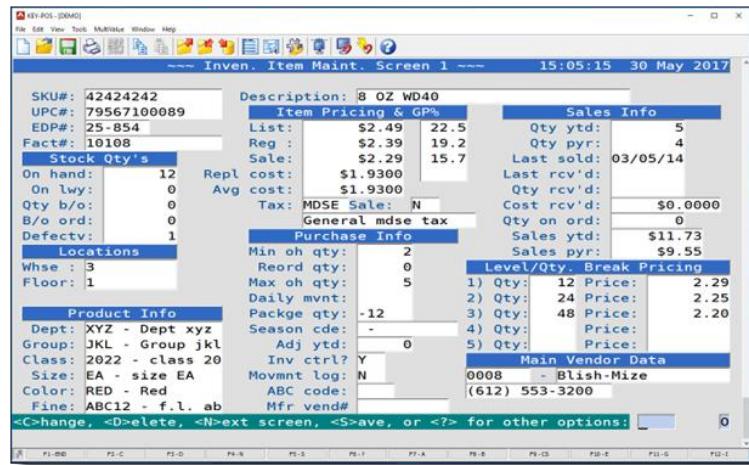

MANAGEMENT

Control, automation, and information are the keys to successful computerization.

The **KEY-POS** system gives you unprecedented control over the way in which the system operates. Many other systems have already decided how your business should run. **KEY-POS** lets you call the shots!

We think you are the best judge of how your business should operate. **KEY-POS** was designed to give you the flexibility to control the system, not vice-versa. Plus, **KEY-POS** provides you with the information you need to make up-to-date decisions.

Some of the outstanding management features of the **KEY-POS** system are:

- ◆ Complete control over tender acceptance and procedures

- ◆ User-defined receipt printing by register number and by transaction type

- ◆ Bullet-proof, 3-level security system and individual passwords for remote access

- ◆ User-defined menu system lets you put access to functions right where you want them

- ◆ Data Import and Export

- ◆ Full control over data storage: you decide what to keep and for how long

- ◆ Our exclusive sales calendar instantly displays sales figures for the store or item-by-item, with up-to-the-minute accuracy, monthly, daily, hourly quantity, amount, and customer count

- ◆ Sales and product profitability analysis reports, available in summary or detail, keep you on top of trends and stock movement

- ◆ 24 previous months' sales and receiving statistics per item, and per vendor per item. Current and previous 4 year statistics for detail, summary, and total

- ◆ Customer and inventory ranking reports by sales, quantities, and margin percentage over date ranges

- ◆ Control over backorder, lay-away order fees, deposit amounts, and payment amounts with override

- ◆ Integrated gift certificate processing, printing, and tracking

- ◆ Timekeeping clock system with clock-in and clock-out features

DBMS Inc.

The
K E Y - P O S
Retail Management System

KEY-POS provides you with instant up-to-the-minute information. At the touch of a button, view a month's sales information at a glance. You can view our exclusive sales calendar by individual product and even see sales by the hour!

A host of sales, tax, profitability reports, and inquiries are available at any time, all accurate up to the very minute.

No other system puts this much power at your fingertips.

Instant Access to Monthly Sales

KEY-POS tracks all the information and presents you with clear, concise reports.

Touch a button and immediately see sales histories, year-to-year comparisons, and profitability. **KEY-POS** helps you spot trends and forecast. Many reports are available in both detail and summary formats. Sales information can be reported by whole store, department, product, customer, or chronologically.

You even have the ability to create your own reports.

Purchase Summary

DBMS Inc.

DBMS Inc.
COMPANY PHILOSOPHY

Low Overhead - How can **DBMS Inc.** sell the **KEY-POS** System for so much less than the other Point of Sale systems? Low Overhead! We have spent years producing the most efficient ways of maintaining our business. Those savings get passed to our customers, keeping our products reasonable and affordable.

Virtual Offices - DBMS Inc. uses a virtual office concept. Most of our employees work from offices in their homes, eliminating a requirement for a big expensive office building and all its trimmings. By taking advantage of the internet, the need for face-to-face visits between our employees is just not there. Time is not wasted in traffic. People are available for longer hours and are happier in their own controllable surroundings.

Rational Growth Plan - **DBMS Inc.** takes on new customers at a manageable pace that allows for a reasonable, sustainable growth rate. It lets us maintain the small business perspective of our customers and really understand their situations. Certainly, we want to grow our business just as you do, but those in our industry who have grown too quickly have had serious growing pains in service and support that we want to avoid. We continue to add new wholesale distributor markets as time allows.

Low Advertising Costs - Our primary sales method is through exhibiting at wholesale distributor's markets. Although this can be pricey at times, most of our prospective customers are gained this way, as well as through "word of mouth" from our existing customers and their distributor's sales reps. We also generate interest and provide information from our inexpensive web site at www.dbmsinc.com.
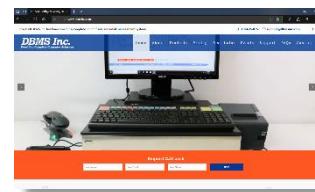

No Outside Sales Force - We have no expensive sales people running around the countryside or making cold calls (driving you crazy). Nor do we have the cost of the management and support system for those people. This results in an enormous savings that can be re-invested in updating our products based on the requests of our customers. We can demonstrate **KEY-POS** over the Internet and our experience gives us what we need to help a store in determining its requirements, without the expense of going to the store. Since our prices are published and uniform, with no salesperson's commission to consider, we don't spend a lot of time and resources haggling over prices.

DBMS Inc.

The
K E Y - P O S
Retail Management System

Reliable Technology Base – The **KEY-POS** Retail Management System was built on a database that has been steadily improved and enhanced over a period of almost 50 years. Mature, robust, elegant systems require only a very small fraction of the support costs of "bleeding edge" technologies used by most of our competition. We do employ the latest proven technology where it is appropriate, but we avoid using technology only for technology's sake - where most of the bugs still exist. This allows us to provide a system that is reliable day in and day out for your business to grow.

No Need to Teach Accounting – Although **KEY-POS** does include an excellent Accounts Receivable system for house charge accounts, it does NOT have a General Ledger, or produce Income Statements and Balance Sheets. While **KEY-POS** has a time-clock/timecard module, it does NOT have a payroll system. Many of our customers successfully use "off the shelf" software such as QuickBooks™ and Peachtree™ to do their accounts payable, general ledger, financial statements, and payroll if they want to do it themselves. **KEY-POS** gives them the information they need to do this. Teaching non-accounting people to run complex accounting systems can be very expensive.

User-Friendly Products – **KEY-POS** is absolutely easy to use. Ask our customers! It's a tool to help you run your business. You will not become a slave to it. It works for you and it is a real workhorse. While **KEY-POS** is not the flashiest Point of Sale system around, it is feature rich and has options you will actually use to help you run your store. Pretty software may be easier to sell, but **DBMS Inc.** focuses on features that our customers need. Why pay for bells or whistles that some computer programmer thought would be trendy, but that you would never, ever use in the real world?

Problem Prevention - Problem resolution is expensive and time consuming. That is why **DBMS Inc.** focuses on problem prevention. Redundancy is used throughout our entire system. Stable power supply from surge protection and battery backup is used on all equipment. We protect your data with easy to use backups and Raid 1 hard drive protection. Our servers employ a multi-level security protocol to prevent any outside malicious software coming in contact with your store's information. All of our equipment is built with generic hardware for ease of service or repair should it ever be needed. All of this means fewer phone calls and more time for us to improve our software with the new features you want to have at a cost you can afford.
